

MP100 | WEB DEVELOPMENT PROJECT STATEMENT

Title: Dotties Home Adventure

Semester/Year: Fall 2021

Coding language/software: Sublime Text

For my project, I chose to do a choose your own adventure story on my dog Dottie. Although I had a lot of ideas on what my project should be on, I chose Dottie because she's adorable but is also rarely left alone by herself. My family and I usually take her everywhere, but I wanted to imagine what she'd do if she was home alone. Out of all the actions I put in my project, she is most likely to sit by the door and wait for us to come home. Although coding for the website wasn't that difficult once I got the hang of it, doing the CSS was a lot harder than I thought. Creatively I wasn't sure what to make the website look like, but seeing people's projects gave me an idea of what I wanted to do. After playing with the position of the images, I decided to center everything on the page. When it came to the color scheme of my website, I was picking random colors, but after searching through color palettes, I found one I liked.
